

Project Details: Voice Call Quality Customer Experience

This dataset is about the Indian Voice Call Quality Customer Experience. It has Customers Feedback Captured using the TRAI MyCall App. Customers rate their perceived experience about voice call quality in real time and help TRAI gather customer experience data along with other network data.

Released Under:

National Data Sharing and Accessibility Policy (NDSAP)

Contributor:

Ministry of Communications

Department of Telecommunications (DOT)

Telecom Regulatory Authority of India (TRAI)

Dataset Description

The attached data folder contains multiple files, each representing one month of user responses. Each row corresponds to an individual response with 8 columns:

1. Operator: Telecom operator used by the person
2. Inout_travelling: Whether the rating is for indoor or outdoor
3. Network_type: Type of network (e.g., 4G)
4. Rating: Rating provided by the user
5. Calldrop_category: Category of the call drop (if any)
6. Latitude: User's current latitude
7. Longitude: User's current longitude
8. State_name: State of the user

Business Problems / Questions

1. Which operator is best rated in each state overall and in terms of indoor and outdoor traveling?
2. Is there any correlation between network type and rating?
3. Is call drop correlated with the rating?
4. Where do we see more call drops - outside or inside? Can we use hypothesis testing to verify?
5. Create a dashboard (using any visualization tool) - visualize any metrics as desired.
